

We tailor our training methodologies to meet your individual needs.

Entium demystifies technology by presenting information in easily understandable terms. Our trainers have a long history of providing beginner- through advanced-level technology training to corporations, universities, and government entities. Entium has the expertise to develop courseware for both generic and proprietary software, and we focus course content to your corporation's unique needs. Our training systems use a proven education methodology. Entium's systematic approach to training includes skills assessment, custom courseware development, self-study products, and instructor-led courses.

Our instructors don't just lecture; they get you actively involved in your training.

Entium courses emphasize student interaction in order to reinforce course content. Our courses feature paired exercises and group activities that create social involvement, encourage team building, and simulate your real-world workplace. Studies indicate that when people are part of a team, they exceed individual limitations, learn faster, and retain more. Hands-on experience enhances learning by allowing students to apply knowledge immediately through in-class exercises.

At Entium, our trainers develop custom courseware and specifically gear course content to your corporation's unique needs. We can develop formal, hands-on training curricula or seminars for less-intensive instruction. Formal training provides a high level of interaction with subject matter experts for thorough training. Seminar training is recommended for larger groups requiring the basic concepts and knowledge of how a technological system operates relative to their own work environment.

Our instructors have the comprehensive experience required to provide students with valuable tips and practical applications of the course technologies to their daily job tasks. Our instructors don't just lecture; they get you actively involved in your training.

Training can be delivered both on and off site. On-site training provides expert-level training at your location. This program is a most effective way to train your resources. On-site training minimizes the time required for employees to be away from their day-to-day responsibilities, requires no travel, and is a cost-effective means for classes both small and large. Off-site training removes the distractions of a daily work environment, an important factor in an effective training program.

All training sessions are designed to help students acquire the skills needed...fast and in-depth. Because our training is job focused, students are able to apply new skills upon their return to work and begin reaping the benefits immediately.
